SUPPORTED DEVICES

The following table shows Grandstream products supporting HTTP API covered in this guide.

Model	Firmware
GDS3710	1.0.3.32 or higher

OVERVIEW

Grandstream Door System supports HTTP API (Application Programming Interface).

This document explains in detail the external HTTP-based application programming interface and parameters of functions via the supported method. The HTTP API is firmware dependent. Please refer to the related firmware Release Note for the supported functions.

Administrator Privilege is required, and administrator authentication verification has to be executed before any operation to the related parameter configuration.

Syntax: Client → Server

```
https://<servername>/goform/config?cmd=get&type=<module>
```

```
https://<servername>/goform/config?cmd=set&<param>=<value>&<param1>=<value>...
```

Notes:

- <**param**> is used to identify the different parameter of functions.
- <**module**> is used to identify the different module of functions.

Authentication

Authentication is using encrypted Challenge / Response mode. After successful authentication, the user with administration privilege needs to include the authentication information in each request header of the operation before the operation can be executed.

The authentication process is shown as following:

Step 1:

Client ➔ Server

```
https://<servername>/goform/login?cmd=login&user=admin&type=0
```

Server ➔ Client

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
<ResCode>0</ResCode>
<ChallengeCode>ChallengeString</ChallengeCode>
<LoginType>0</LoginType>
<RetMsg>OK</RetMsg>
</Configuration>
```

Step 2:

Client ➔ Server

```
https://<servername>/goform/login?cmd=login&user=admin&authcode=<authcodestrin
g>&type=0
```

Server ➔ Client

```
HTTP/1.0 200 OK Content-Type: text/xml; charset=UTF-8
Set-Cookie: session=ac81cade4c9d9264f50c45018fb02c12; path=/;
Set-Cookie: uname=admin; path=/;
Set-Cookie: level=1; path=/;

<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
<ResCode>0</ResCode>
<LoginType>0</LoginType>
<RetMsg>OK</RetMsg>
</Configuration>
```

Notes:

The rule of authentication code string is generated via following rules:

- authcodestring = md5(ChallengeString:GDS3710IZpRsFzCbM:password);
 - ChallengeString is the reply strings from Server by **Step 1**
 - Password is the login password of the GDS37xx device.
- The **RED** part of the string is the replied authentication information from Sever after successful authentication. Such information has to be existed in the operation message header of all the following operations, otherwise the operation is abnormal and will fail.

Example: Delete the card with ID number: 7465995

Client ➔ Server

```
POST /goform/config
HTTP/1.1
Host: 192.168.86.8
Connection: keep-alive
Content-Length: 26
Cache-Control: max-age=0
Origin: https://192.168.86.8
User-Agent: Mozilla/5.0 (Windows NT 6.1; Win64; x64) AppleWebKit/537.36
(KHTML, like Gecko) Chrome/57.0.2987.98 Safari/537.36
Content-Type: application/x-www-form-urlencoded; charset=UTF-8
Accept: application/xml, text/xml, */*, q=0.01
X-Requested-With: XMLHttpRequest
If-Modified-Since: 0
Referer: https://192.168.86.8/Pages/user_list.html?t=1496385815560
Accept-Encoding: gzip, deflate, br
Accept-Language: zh-CN,zh;q=0.8
Cookie: gdsauthkey4433=150e080c781be0deb8d5a8a2c6ed95d2;
gdslanguage=zh; session=643e985e113a50979fd245762be01a57;
uname=admin; level=1; gdsauthkey443=643e985e113a50979fd245762be01a57;
curpage=user_list.html cmd=del&user_list=7465995,
```

Note:

The **RED** part of the string is the Authentication String MUST be carried in the header message by the cookie during operation

Tips of HTTP API Usage:

- In most situation, parameters fetched by using “GET” can be revised by using “SET”, except Status or Display parameter information.
- When using “SET”, sometimes there are inter-action or restrictions among those related parameters, all parameters must “SET” or configure correctly together before the device taking effect.
- Please refer to related WebGUI page for reference if unsure about the HTTP API.

URL Parameter Definitions

<parameter>=<value>	Values	Description
cmd=<string>	add/del/set/get /reboot/reset	<p><u>Operation command type (Required):</u></p> <p>add: add parameter or data del: delete parameter or data set: set device parameter get: get command or parameter reboot: reboot device reset: factory reset device</p>

XML Returned by Device

Response Code	Response Text	Description
0	OK	Success
1		User does not exist
2		Password error
3		Max login or max white list number
4		Phone number exist
5		Parameter should not be empty
6		Parameter contain illegal characters
7		Message sending error
8		New password not match
9		FTP test error
10		Hostage passwd

11		Remote /Local PIN not same with hostage password
12		SMTP timeout
13		Retrieve Password (Account is no exist)
14		SMTP authentication failed
15		SMTP test failed
16		Invalid SMTP server
17		Email address is empty
18		Email test timeout
19		SIP is calling
401		Authentication failed
408		Session time out

Example:

Returned XML by device:

```

<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
<ResCode>0</ResCode>
<RetMsg>OK</RetMsg>
</Configuration>

```

PARAMETERS

1. Card Management

Method Supported: **cmd = get/add/set/del**

Get:

```
http://<servername>/goform/config?cmd=get&type=user_list
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
    <total>1</total>
    <item>
        <idx>0</idx>    <!-- index, assigned by system -->
        <ID>1</ID>      <!-- card number -->
        <room_num>1</room_num> <!-- virtual number -->
        <sip_num>1</sip_num>    <!-- sip number -->
        <username>1</username>  <!-- user name -->
        <passwd>1</passwd>      <!-- open door password -->
        <gender>0</gender>      <!-- gender -->
        <identify_num>1</identify_num> <!-- ID number -->
        <cellphone_num>1</cellphone_num> <!-- cellphone number -->
        <EOD>20991231</EOD> <!-- card valid date -->
        <enable_card>1</enable_card>  <!-- enable or disable -->
    </item>
    <item>
        <idx>1</idx>
        <ID>1</ID>
        <room_num>1</room_num>
        <sip_num>1</sip_num>
        <username>1</username>
        <passwd>1</passwd>
        <gender>0</gender>
```

```

<identify_num>1</identify_num>
<cellphone_num>1</cellphone_num>
<EOD>20991231</EOD>
<enable_card>1</enable_card>
</item>
<item>
<idx>2</idx>
<ID>1</ID>
<room_num>1</room_num>
<sip_num>1</sip_num>
<username>1</username>
<passwd>1</passwd>
<gender>0</gender>
<identify_num>1</identify_num>
<cellphone_num>1</cellphone_num>
<EOD>20991231</EOD>
<enable_card>1</enable_card>
</item>
</Configuration>

```

Add / Set:

http://<servername>/goform/config?cmd=<add|set>&<parameter>=<value>...

<parameter>=<value>	Values	Description
ID=<int>	Numeric Digits	RFID card number. Unique and cannot be empty
room_num =<int>	Numeric Digits	Virtual Number (Room Number) Cannot be empty
sip_num =<string>	Numeric Digits	SIP extension number (max. length: 20) Binding via SIP
username =<string>	Character Strings	Name (max. 32 characters). Cannot be empty

passwd =<string>	Numeric Digits	PIN to open door (max. length: 12)
gender =<int>	<0 1>	Gender 0 - Male (Default) 1 - Female
ID=<string>		Delete ID number. “,” used as separator; max 20 can be deleted on time.
identify_num =<string>		ID Number (max. length: 20)
cellphone_num =<int>		Cell Number (max. length: 16)
EOD =<int>		Valid Date Format: 20171001 (YYYYMMDD) Default: 20991231
enable_card =<int>	<0 1>	Enable the RFID card 0: Disable 1: Enable

Del:

```
http://<servername>/goform/config?cmd=del&ID=ID1,ID2,ID3,ID4,...
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
</Configuration>
```

2. Door System Basic Settings

Support method: **cmd = get / set**

Get:

```
http://<servername>/goform/config?cmd=get&type=door
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
<ResCode>0</ResCode>
<RetMsg>OK</RetMsg>
<P14100>0</P14100>
<P14101>5</P14101>
<P14829>300</P14829>
<P14830>1000</P14830>
<P14846>2</P14846>
<P14102>5</P14102>
<P14103>1</P14103>
<P15420>1</P15420>
<P15421>1</P15421>
<P14105>0</P14105>
<P10462></P10462>
<P10464>1</P10464>
<P10465>0</P10465>
<P15423>5</P15423>
<P14340>0</P14340>
<P14120>0</P14120>
<P14121>0</P14121>
<P14800>1</P14800>
<P14801>1</P14801>
<P14856>0</P14856>
<P14827>0</P14827>
<P10457>N</P10457>
```

```

<P10463>N</P10463>
<P14850>0</P14850>
<P14851>N</P14851>
<P14852/></P14852>
<P14853></P14853>
<P14858>0</P14858>
<P14560>142000</P14560>
<P14561>200059</P14561>
<P14562>1</P14562>
<P14580>0</P14580>
<P15301>0</P15301>
</Configuration>

```

Set:

http://<servername>/goform/config?cmd=set&<parameter>=<value>...

<parameter>=<value>	Values	Description
P14100=<int>	0 - 20	Delay before Unlock Action(s)
P14101=<int>	1 - 20	Unlock Action Holding Time(s)
P14829=<int>	0 - 2000	Minimum Interval of Swiping Card (in millisecond)
P14103=<int>	<0 1>	Take snapshot when strike operated: 0: No 1: Yes
P15420=<int>	<0 1>	Take snapshot when doorbell pressed: 0: No 1: Yes

P14856=<int>	<0 1>	Call Mode: 0: Virtual Number (or Room Number) 1: SIP Number
P14827=<int>	<0 1 2>	Mode of Door Bell: 0: Call Doorbell Number 1: Doorbell Output Control (DO1) 2: Both above
P10462=<string>		Number Called When Door Bell Pressed (Max. Length=255)
P10457=<string>		PIN for Open Door Remotely Max. length = 8
P10464=<int>	<0 1 2>	PIN type for Open Door locally: 0: Private PIN 1: Universal PIN 2: Card & private PIN
P10463=<string>		Local PIN to Open Door (all digit's value)
P14858=<int>	<0 1>	Enable DTMF Open Door 0: Enable 1: Disable (Default)
P14825=<int>	<0 1>	Enable Guest PIN Open Door: 0: Disable 1: Enable
P14851=<string>		Guest PIN: Numerical Digits Max. Length = 8
P14852=<string>	e.g.: 2017/06/14 00:00:00	Guest PIN starting time

P14853=<string>	e.g.: 2017/06/14 02:02:10	Guest PIN ending time
P14580=<int>	<0 1>	Disable Auto-Answer 0: Disable (Default) 1: Enable
P14582=<int>	<0 1>	Enable Doorbell Button to Hang Up Call 0: Disable (Default) 1: Enable
P15421=<int>	<0 1>	Disable Keypad (except Doorbell Button) 0: Disable (Default) 1: Enable
P15422=<int>	<0 1>	Enable On Hook After Remote Door Opened 0: Disable (Default) 1: Enable
P15424=<int>	<0 1>	Enable HTTP API Remote Open Door 0: Disable (Default) 1: Enable
P15428=<int>	5 -- 300	Open Door Valid Time
P10465=<int>	<0 1>	Enable Card Issuing Mode 0: Disable (Default) 1: Enable
P15423=<int>	1-1440	Card Issuing State Expire Time(m)
P14801=<int>	<0 1>	Enable White LED Back Light 0: Disable 1: Enable

P15301=<int>	<0 1>	Central Mode 0: Disable (Default) 1: Enable
P14340=<int>	<0 1 2>	Key Pressing Tone 0: Default 1: DTMF 2: Mute
P14120=<int>	<0 1>	Enable Weigand Input 0: Disable 1: Enable
P14121=<int>	<0 1 2>	Weigand Output 0: Disable 1: Relay and Local Authentication 2: Relay and Bypass Local
P14560=<string>		Start time turning on the Blue Door Bell Light Digit string like "1459". The first two digit is 24-hour format, las two is minutes 00 <= hour <=23; 00 <= minute <= 59
P14561=<string>		End time turning on the Blue Door Bell Light Digit string like "1459". The first two digit is 24-hour format, las two is minutes 00 <= hour <=23 00 <= minute <= 59
P14562=<int>	<0 1>	Enable Door Bell Blue Light 0: Disable 1: Enable

3. Group

Support method: **cmd = get/add/set/del**

Get:

```
http://<servername>/goform/config?cmd=get&type=group
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
<ResCode>0</ResCode>
<RetMsg>OK</RetMsg>
<group>
  <groupid>1</groupid>
  <schid>0</schid>
  <groupName>Qua</groupName>
</group>
<group>
  <groupid>2</groupid>
  <schid>1</schid>
  <groupName>Tech</groupName>
</group>
<P15301>0</P15301>
<schdeulelist>
  <schdeuleitem>AAA@0,</schdeuleitem>
  <schdeuleitem>BBB@0,</schdeuleitem>
  <schdeuleitem>schedule3@0,0@0000@0000,</schdeuleitem>
  <schdeuleitem>schedule4@0,0@0000@0000,</schdeuleitem>
  <schdeuleitem>schedule5@0,0@0000@0000,</schdeuleitem>
  <schdeuleitem>schedule6@0,0@0000@0000,</schdeuleitem>
  <schdeuleitem>schedule7@0,0@0000@0000,</schdeuleitem>
  <schdeuleitem>schedule8@0,0@0000@0000,</schdeuleitem>
  <schdeuleitem>schedule9@0,0@0000@0000,</schdeuleitem>
  <schdeuleitem>schedule10@0,0@0000@0000,</schdeuleitem>
</schdeulelist>
</Configuration>
```

Add:

```
http://<servername>/goform/config?cmd=add&<para1>=<value1>&<para2>=<value2>
```

<para>=<value>	Values	Description
groupname=<string>&schid=<int>	groupname: string	groupname Max. Length=64
	schid: 1 -- 10	Time Schedule Index

Set:

```
http://<servername>/goform/config?cmd=set&<para1>=<value1>&<para2>=<value2>&<para3>=<value3>
```

<parameter>=<value>	Values	Description
<para1>=<value1>&<para2>=<value2>&<para3>=<value3> groupid=<int>&groupname=<string>&schid=<int>	groupid: 1-10 schid: 1-10	groupname Max. Length=64 schid: Time Schedule Index groupid: group index.

Del:

```
http://<servername>/goform/config?cmd=del&<para1>=<value1>
```

<parameter>=<value>	Values	Description
groupid=<int>	1 - 10	groupid: group index.

4. Schedule

Support method: **cmd = get / set**

Get:

```
http://<servername>/goform/config?cmd=get&type=door_schedule
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
    <P15301>0</P15301>
    <P15200>AAA@0,</P15200>
    <P15201>BBB@0,</P15201>
    <P15202>schedule3@0,0@0000@0000,</P15202>
    <P15203>schedule4@0,0@0000@0000,</P15203>
    <P15204>schedule5@0,0@0000@0000,</P15204>
    <P15205>schedule6@0,0@0000@0000,</P15205>
    <P15206>schedule7@0,0@0000@0000,</P15206>
    <P15207>schedule8@0,0@0000@0000,</P15207>
    <P15208>schedule9@0,0@0000@0000,</P15208>
    <P15209>schedule10@0,0@0000@0000,</P15209>
    <holidayitem>holiday1,</holidayitem>
    <holidayitem>holiday2,</holidayitem>
    <holidayitem>holiday3,</holidayitem>
    <holidayitem>holiday4,</holidayitem>
    <holidayitem>holiday5,</holidayitem>
    <holidayitem>holiday6,</holidayitem>
    <holidayitem>holiday7,</holidayitem>
    <holidayitem>holiday8,</holidayitem>
    <holidayitem>holiday9,</holidayitem>
    <holidayitem>holiday10,</holidayitem>
</Configuration>
```

Set:

http://<servername>/goform/config?cmd=set&<paramter>=<value>...

<parameter>=<value>	Values	Description
P15200=<string>		Value format:
P15201=<string>		name@holiday_mode,weekday0@start_time0@end_time0,weekday1@start_time1@end_time1,...
P15202=<string>		
P15203=<string>		Use (,) as separator when set multiple numbers.
P15204=<string>		
P15205=<string>		e.g.:
P15206=<string>		AAA@0,0@0830 @1459 ,0@1600@1800,
P15207=<string>		AAA is a revisable name for a schedule, Max.
P15208=<string>		Length = 64
P15209=<string>		1 st @ represent holiday mode, 0-10.
		2 nd @ represent date of the week, 0-6, Sunday to Saturday
		3 rd @ the pre-four digits represent start time of that period, 0830 represent 08:30 in 24 hour format;
		2 nd @ the post-four digits represent end time of that period, 1459 represent 14:59 in 24 hour format.

Notes:

- There should be **NO** overlap in any time period configured in the same day.
- (,) should be used to separate the different time period configured.

5. Holiday

Support **cmd = get/set**

Get:

```
http://<servername>/goform/config?cmd=get&type=holiday
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
    <P15301>0</P15301>
    <P15250>schedule_1,</P15250>
    <P15251>schedule_2,</P15251>
    <P15252>schedule_3,</P15252>
    <P15253>schedule_4,</P15253>
    <P15254>schedule_5,</P15254>
    <P15255>schedule_6,</P15255>
    <P15256>schedule_7,</P15256>
    <P15257>schedule_8,</P15257>
    <P15258>schedule_9,</P15258>
    <P15259>schedule_10,</P15259>
</Configuration>
```

Set:

```
http://<servername>/goform/config?cmd=set&<parameter>=<value>...
```

<parameter>=<value>	Values	Description
P15250=<string>		Value format: name,start_date0@end_date0, start_date1@end_date1,
P15251=<string>		
P15252=<string>		

P15253=<string>	Use (,) as separator when set multiple dates.
P15254=<string>	e.g.: schedule_1,20180405@20180420,
P15255=<string>	20180421@20180425,
P15256=<string>	schedule_1is a revisable name for a schedule, Max.
P15257=<string>	Length = 64
P15258=<string>	
P15259=<string>	

Notes:

- There should be **NO** overlap in any time period configured in the same day.
- (,) should be used to separate the different time period configured.

6. Date and Time

Support cmd = get/set

Get:

```
http://<servername>/goform/config?cmd=get&type=date
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
    <P64>16</P64>
    <P246/>
    <P14046>GMT+00:00</P14046>
    <P5006>1</P5006>
    <P30>pool.ntp.org</P30>
    <P10006>1440</P10006>
    <P10004>0</P10004>
    <P10005/>
    <P10008>0</P10008>
    <P14040>2018</P14040>
```

```

<P14041>4</P14041>
<P14042>24</P14042>

P276=<int>	<0 1>	Enable SSH 0: Disable 1: Enable
P27006=<int>	22 - 65535	SSH Port

9. User Management

Support **cmd = set**

Set:

```
http://<servername>/goform/config?cmd=set&<parameter>=<value>...
```

<parameter>=<value>	Values	Description
oldpwd=<string>		Oldpwd: Old Password, Max. Length = 32

Newpwd=<string>	Newpwd: New Password Max. Length = 32 cfmnewpwd: Confirmed New Password; Max. Length = 32
cfmnewpwd=<string>	e.g.: cmd=set&oldpwd=123&newpwd=admin&cfmn ewpwd=admin
P10124=<string>	Oldpwd、Newpwd、cfmnewpwd , three must be set at the same time, and Newpwd must be the same as cfmnewpwd. Otherwise invalid. Password Recover Email Address

10. SIP Settings

Support **cmd = get/set**

Get:

```
http://<servername>/goform/config?cmd=get&type=sip
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
    <P12054>1</P12054>
    <P499>0</P499>
    <P407/>
    <P402/>
    <P2412/>
    <P403/>
    <P2433/>
```

```

P424=<int>	<100 102>	Special Feature 100: Standard 102: Broadsoft
P2495	<0 1>	Enable Session Timer 0: Disable 1: Enable

11. White List

Support cmd = get/add/set/del

Get:

```
http://<servername>/goform/config?cmd=get&type=sip
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
```

```
<P10460>1111</P10460>
<P10460>2222</P10460>
<P10460>3333</P10460>
</Configuration>
```

Set:

http://<servername>/goform/config?cmd=set&P10460=num

Add:

http://<servername>/goform/config?cmd=add&P10460=num

Del:

http://<servername>/goform/config?cmd=del&P10460=num1,num2,num3, ...

<parameter>=<value>	Values	Description
P10454=<int>	<0 1>	Enable White List 0: Disable 1: Enable
P10460=<string>		Use (,) as separator when deleting multiple numbers.

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
</Configuration>
```

12. Video Settings

Support **cmd = get/set**

Get:

```
http://<servername>/goform/config?cmd=get&type=video
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
    <P10572>1</P10572>
    <P12306>96</P12306>
    <P12313>1</P12313>
    <P12307>1025</P12307>
    <P12315>4096</P12315>
    <P12904>30</P12904>

15. Audio Settings

Support cmd = get/set

Get:

http://<servername>/goform/config?cmd=get&**type=audio**

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>

<ResCode>0</ResCode>

<RetMsg>OK</RetMsg>

<P14000>1</P14000>

<P14002>13</P14002>

<P14003>4</P14003>

<P14836>4</P14836>

<P14835>4</P14835>

</Configuration>
```

Set:

http://<servername>/goform/config?cmd=set&<parameter>=<value>...

<parameter>=<value>	Values	Description
P14000=<int>	<1 2 4>	Audio Codec: 1: PCMU 2: PCMA 4: G722
P14003=<int>	GDS3710: 0 – 6	System Volume
P14835=<int>	GDS3710: 0 – 6	Door Bell Volume

16. Privacy Masks

Support **cmd = get/set**

Get:

```
http://<servername>/goform/config?cmd=get&type=privacy
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
    <P14225>0@0,0,0,0;0@0,0,0;0@0,0,0;0@0,0,0;</P14225>

```

Set:

```
http://<servername>/goform/config?cmd=set&<parameter>=<value>...
```

<parameter>=<value>	Values	Description
P14225=<string>		<p>Region for Privacy Masks</p> <p><u>Format:</u></p> <p>Enable @Top Left x1 coordinates, Top Left y1 coordinates; Bottom Right x2 coordinates, Bottom Right y2 coordinates.</p> <p>e.g.: 0@0,0,0,0; 0@0,0,0,0; 0@0,0,0,0; 0@0,0,0,0;</p>

Digit before @ represents function, 0: Disable/Hide
1: Enable/Display

Coordinates are separated by (,)
Region is separated by (;

Please Do remember the last ; and configure the 4 regions at the same time all at once.

Rules:

**0 <= x1, x2 <= 704; 0 <= y1, y2 <= 576; x1 <= x2;
y1 <= y2**

17. Alarm Config

Support **cmd = get/set**

Get:

```
http://<servername>/goform/config?cmd=get&type=event
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>

    <ResCode>0</ResCode>

18.Alarm Schedule Configuration

Support **cmd = get/set**

Get:

```
http://<servername>/goform/config?cmd=get&type=alarm_schedule
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
    <P14200>schedule1,0@0000@2359,</P14200>
```

```

<P14201>schedule2,0@0830@1459,0@1500@1820,</P14201>

<P14202>schedule3,0@0000@2359,</P14202>

<P14203>schedule4,0@0000@2359,</P14203>

<P14204>schedule5,0@0000@2359,</P14204>

<P14205>schedule6,0@0000@2359,</P14205>

<P14206>schedule7,0@0000@2359,</P14206>

<P14207>schedule8,0@0000@2359,</P14207>

<P14208>schedule9,0@0000@2359,</P14208>

<P14209>schedule10,0@0000@2359,</P14209>

</Configuration>
  
```

Set:

http://<servername>/goform/config?cmd=set&<parameter>=<value>...

<parameter>=<value>	Values	Description
P14200=<string>		e.g.: <P14201>schedule2,0@0830@1459,0@1500@1820,</P14201>
P14201=<string>		schedule2 is a revisable name for a time period, Max. Length = 20
P14202=<string>		
P14203=<string>		1 st @ represent date of the week, 0-6, Sunday to Saturday
P14204=<string>		2 nd @ the pre-four digits represent start time of that period, 0830 represent 08:30 in 24 hour format;
P14205=<string>		2 nd @ the post-four digits represent end time of that period, 1459 represent 14:59 in 24 hour format.
P14206=<string>		
P14207=<string>		<u>NOTE:</u>
P14208=<string>		There should be NO overlap in any time period configured in the same day.
P14209=<string>		(,) should be used to separate the different time period configured.

19. Alarm Action Configuration

Support cmd = get/set

Get:

```
http://<servername>/goform/config?cmd=get&type=alarm_profile
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>

<ResCode>0</ResCode>

<RetMsg>OK</RetMsg>

<P14827>0</P14827>

<P14300>profile1@0,0,0,0,0,0</P14300>
<P14301>profile2@0,0,0,0,0,0,</P14301>
<P14302>profile3@0,0,0,0,0,0,</P14302>
<P14303>profile4@0,0,0,0,0,0,</P14303>
<P14304>profile5@0,0,0,0,0,0,</P14304>
<P14305>profile6@0,0,0,0,0,0,</P14305>
<P14306>profile7@0,0,0,0,0,0,</P14306>
<P14307>profile8@0,0,0,0,0,0,</P14307>
<P14308>profile9@0,0,0,0,0,0,</P14308>
<P14309>profile10@0,0,0,0,0,0,</P14309>

</Configuration>
```

Set:

```
http://<servername>/goform/config?cmd=set&<parameter>=<value>...
```

<parameter>=<value>	Values	Description
P14300=<string>		e.g.: <P14300>profile1@0,0,0,0,0,0</P14300>
P14301=<string>		profile1 is revisable name of alarm action, Max. Length = 20
P14302=<string>		
P14303=<string>		1 st digit after @ represents whether “Upload to Alarm Center”: 0: Disable 1: Enable
P14304=<string>		2 nd digit after @ represents whether “Sound Alarm” 0: Disable 1: Enable
P14305=<string>		3 rd digit after @ represents whether “Voice Alarm to SIP Phone” 0: Disable 1: Enable
P14306=<string>		4 th digit after @ represents whether “Alarm Output” 0: Disable 1: Enable
P14307=<string>		5th digit after @ represents whether “Send Email” 0: Disable 1: Enable
P14308=<string>		6 th digit after @ represents whether “Upload JPEG” snapshot 0: Disable 1: Enable
P14309=<string>		

20. Alarm Phone List

Support cmd = get/add/del

Get:

```
http://<servername>/goform/config?cmd=get&type=sip
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
```

```
<ResCode>0</ResCode>
<RetMsg>OK</RetMsg>
<P10459>111</P10459>
<P10459>aaa</P10459>
</Configuration>
```

Add:

http://<servername>/goform/config?cmd=add&P10459=num1,num2, ...

<parameter>=<value>	Values	Description
P10459=<string>		Alarm Phone

Del:

http://<servername>/goform/config?cmd=del&P10459=num1,num2,num3, ...

<parameter>=<value>	Values	Description
P10459=<string>		(,) used as a separator when multiple alarm numbers deleted.

21. Email Settings

Support **cmd = get/set**

Get:

http://<servername>/goform/config?cmd=get&type=smt

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>

<ResCode>0</ResCode>

<RetMsg>OK</RetMsg>

<P10120>0</P10120>

<P10121>smtp.google.com</P10121>

<P10122>25</P10122>

<P10123>kevin@google.com</P10123>

<P10124>kevin@google.com</P10124>

<P14348>kevin@google.com</P14348>

<P14349>kevin@google.com</P14349>

<P10127>kevin</P10127>

<P10129>0</P10129>

<P10128r>123</P10128r>

<P10128>Y</P10128>

</Configuration>
```

Set:

http://<servername>/goform/config?cmd=set&<parameter>=<value>...

<parameter>=<value>	Values	Description
P10121=<string>		SMTP Mail Server
P10122=<string>		Port of SMTP Server
P10123=<string>		Sender's email address. Max. Length = 127
P10127=<string>		Sender's User Name, Max. Length = 63
P10128=<string>		Sender's email password, Max. Length = 63

P10124=<string>		Password Recovery Email, Max. Length = 63
P14348=<string>		Alarm to email address 1, Max. Length = 127
P14349=<string>		Alarm to email address 2, Max. Length = 127
P10129=<int>	<0 1>	SSL Encryption 0: Disable 1: Enable

22. FTP Settings

Support **cmd = get/set**

Get:

```
http://<servername>/goform/config?cmd=get&type=ftp
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
  <ResCode>0</ResCode>
  <RetMsg>OK</RetMsg>
  <P12054>1</P12054>
  <P10140>1</P10140>
  <P14113>1</P14113>
  <P14114/>
  <P14115>21</P14115>
  <P14116/>
  <P14118>/</P14118>
  <P14330/>
  <P14332/>
  <P14117/>
</Configuration>
```

Set:

http://<servername>/goform/config?cmd=set&<parameter>=<value>...

<parameter>=<value>	Values	Description
P14113=<int>	<0 1>	Storage Server Type 0: FTP 1: Central Storage (GDSManager Configure)
P14114=<string>		FTP Server IP or FQDN, Max. Length = 255
P14115=<int>		FTP Server Port, Max. Length = 5
P14116=<string>		FTP User Name, Max. Length = 63
P14118=<string>		FTP Path, Max. Length = 255

23. Upgrade Configuration

Support **cmd = get/set**

Get:

http://<servername>/goform/config?cmd=get&**type=upgrade**

Example:

```

<?xml version="1.0" encoding="UTF-8" ?>

<ResCode>0</ResCode>

<RetMsg>OK</RetMsg>

<P12054>1</P12054>

<P6767>1</P6767>

<P192>fm.grandstream.com/gs</P192>

```

```
<P6768/>

<P232/>

<P233/>

<P212>2</P212>

<P237>fm.grandstream.com/gs</P237>

<P1360/>

<P234/>

<P235/>

<P6769/>

<P1361/>

<P1359/>

<version_limit>1.0.3.1</version_limit>

<P193>10080</P193>

<P194>1</P194>

<P145>1</P145>

<P1414>0</P1414>

<P8463>0</P8463>

</Configuration>
```

Set:

```
http://<servername>/goform/config?cmd=set&<parameter>=<value>...
```

<parameter>=<value>	Values	Description
P212=<int>	<0 1 2>	Upgrade Method: 0: TFTP 1: HTTP 2: HTTPS
P192=<string>		Firmware Server Path
P6768=<string>		Firmware HTTP/HTTPS User Name
P6769=<string>		Firmware HTTP/HTTPS Password
P232=<string>		Firmware Upgrade File Prefix
P233=<string>		Firmware Upgrade File Postfix
P212=<int>	<0 1 2>	Config Upgrade Method 0: TFTP 1: HTTP 2: HTTPS
P237=<string>		Config Server Path
P1360=<string>		Config HTTP/HTTPS User Name
P1361=<string>		Config HTTP/HTTPS Password
P1359=<string>		XML Config File Password
P234=<string>		Config Upgrade File Prefix
P235=<string>		Config Upgrade File Postfix
P193=<int>	60 - 525600	Automatic Upgrade Interval (Minutes)
P145=<int>	<0 1>	DHCP Option 66 Override Server 0: Disable 1: Enable

P1414=<int>	<0 1>	Zero Config (for UCM Provisioning) 0: Disable 1: Enable
P194=<int>	<0 1>	Automatic Upgrade 0: Disable 1: Enable
P8463=<int>	<0 1>	Validate Server Certificates 0: Disable 1: Enable

24. Reboot & Reset

Support **cmd = reboot/reset**

Reboot:

```
http://<servername>/goform/config?cmd=reboot
```

Reset:

```
http://<servername>/goform/config?cmd=reset&P12055=<value>
```

<parameter>=<value>	Values	Description
P12055=<int>	<0 1 2 3>	Type of Reset Operation: 0: Clear All Data 1: Retain Network Data Only 2: Retain Only Card Information 3: Retain Network Data and Card Information

25.Syslog or Debug

Support **cmd = get/set**

Get:

```
http://<servername>/goform/config?cmd=get&type=debug
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>

<ResCode>0</ResCode>

<RetMsg>OK</RetMsg>

<P207>192.168.1.10</P207>

<P208>0</P208>

</Configuration>
```

Set:

```
http://<servername>/goform/config?cmd=set&<parameter>=<value>...
```

<parameter>=<value>	Values	Description
P207=<string>		Debug Log Server IP or FQDN
P208=<int>	<0 1 2 3 4>	Debug Log Level: 0: None 1: Debug 2: Info 3: Warning 4: Error

26.Data Maintenance

Support **cmd = export/upload**

Export:

```
http://<servername>/goform/config?cmd=export&type=0&data_type=0
```

<parameter>=<value>	Values	Description
data_type=<int>	<0 1>	The type of system config file. 0: System Config Data(No include password) 1: System Config Data(No include password)

Upload:

```
http://<servername>/goform/config?cmd=upload&type=1
```

27.Event Notification

Support **cmd = get/set**

Get:

```
http://<servername>/goform/config?cmd=get&type=log
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
  <ResCode>0</ResCode>
```

```

<RetMsg>OK</RetMsg>

<P15410>1</P15410>

<P15413>http://192.168.1.2:80/</P15413>

<P15414>admin</P15414>

<P15415>admin</P15415>

</Configuration>

```

Set:

http://<servername>/goform/config?cmd=set&<parameter>=<value>...

<parameter>=<value>	Values	Description
P15410=<int>	<0 1>	Enable Event Notification 0: Disable 1: Enable
P15417=<int>	<1 2>	Via Type 1: HTTP 2: HTTPS
P15413=<string>		HTTP Server URL: Format ip:port/path . Example: 192.168.1.2:80/ Max. Length=256
P15414=<string>		HTTP Server Username: If don't need the Username & Password to access the HTTP server, please keep empty. Max. Length=128
P15415=<string>		HTTP Server Password: If don't need the Username & Password to access the HTTP server, please keep empty. Max. Length=128

P15416=<string>

URL Template

Default:

{ "mac": "\${MAC}", "content": "\${WARNING_MSG}" }

28. Trusted CA Certificates

Support cmd = get/set

Get:

```
http://<servername>/goform/config?cmd=get&type=trustedca
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
    <P8433></P8433>
    <P8433></P8434>
    <P8433></P8435>
    <P8433></P8436>
    <P8433></P8437>
    <P8433></P8438>
</Configuration>
```

Set:

```
http://<servername>/goform/config?cmd=set&<parameter>=<value>...
```

<parameter>=<value>	Values	Description
P8433=<string>		
P8434=<string>		
P8435=<string>		
P8436=<string>		Trusted CA Certificates
P8437=<string>		
P8438=<string>		

29. System Status

Support **cmd = get**

Get:

```
http://<servername>/goform/config?cmd=get&type=sysinfo
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>

<ResCode>0</ResCode>

<RetMsg>OK</RetMsg>

<P89>GDS3710</P89>

<P917>V1.6A</P917>

<P1397>9650001416A</P1397>

<P70>1.0.3.31</P70>

<P45>1.0.3.31</P45>

<P68>1.0.3.31</P68>

<P15009>2 hours 44 minutes</P15009>

<P499>0</P499>

</Configuration>
```

<parameter>=<value>	Values	Description
P89=<string>		Product Model
P208=<int>	<0 1 2 3 4>	Hardware Version
P1397=<string>		Part Number
P70=<string>		Kernel Version
P45=<string>		RootFS Version
P68=<string>		Program Version
P15009=<string>		System Up Time
P499=<int>	<0 1>	SIP Registered Status 0: Unregistered 1: Registered

30. Network Status

Support **cmd = get**

Get:

```
http://<servername>/goform/config?cmd=get&type=net
```

Example:

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
  <ResCode>0</ResCode>
  <RetMsg>OK</RetMsg>
  <P67>00:0B:82:B9:A9:1C</P67>
  <P8>0</P8>
  <P9>192</P9>
  <P10>168</P10>
```

```

<P11>5</P11>

<P12>202</P12>

<P13>255</P13>

<P14>255</P14>

<P15>255</P15>

<P16>0</P16>

<P17>192</P17>

<P18>168</P18>

<P19>5</P19>

<P20>1</P20>

<P10107>0</P10107>

<P21>192</P21>

<P22>168</P22>

<P23>5</P23>

<P24>1</P24>

<P25>192</P25>

<P26>168</P26>

<P27>5</P27>

<P28>1</P28>

<P1684>1</P1684>

<P51>0</P51>

<P87>0</P87>

</Configuration>

```

<parameter>=<value>	Values	Description
P8=<int>	<0 1>	IP Address Mode 0: DHCP 1: Static IP

P9=<int>	0 - 255	IP Address:

P28=<int>	0 - 255	P27. P28.

HTTP API APPLICATION EXAMPLES

Now we provide two examples for reference:

- 1) General parameter revision, e.g.: change the “Unlocking Latency”
- 2) Obtain MJPEG stream

General Parameter Revision

Login Authentication: The authentication is using Challenge / Response encryption mode. After the successful authentication by the administrator, each later on operations will be accepted and successful ONLY when the correct authentication information is included inside the request header.

The authentication process is as following:

Step 1:

Client → Server

```
https://<servername>/goform/login?cmd=login&user=admin&type=0
```

The Wireshark Capture Listed Below:

```
POST /goform/login HTTP/1.1
Host: 192.168.86.3
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; rv:51.0) Gecko/20100101
Firefox/51.0
Accept: application/xml, text/xml, */*; q=0.01
Accept-Language: zh-CN,zh;q=0.8,en-US;q=0.5,en;q=0.3
Accept-Encoding: gzip, deflate
Content-Type: application/x-www-form-urlencoded; charset=UTF-8
If-Modified-Since: 0
X-Requested-With: XMLHttpRequest
Referer: http://192.168.1.3/login.html
Content-Length: 27
Connection: keep-alive

cmd=login&user=admin&type=0
```

Server ➔ Client (Server sending ChallengeCode to Client after receiving the request from Client)

```
HTTP/1.0 200 OK Content-Type: text/xml; charset=UTF-8

<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
  <ResCode>0</ResCode>
  <ChallengeCode>6243b032c7468a9e384e49933914e880</ChallengeCode>
  <LoginType>0</LoginType>
  <RetMsg>OK</RetMsg>
</Configuration>
```

Step 2: Client ➔ Server (Client received ChallengeCode, via **authcodestring** = md5(**ChallengeString**:GDS3710!ZpRsFzCbM:password); generating the **authcodestring**.

Then sending this authcode string back to the Server)

```
https://<servername>/goform/login?cmd=login&user=admin&authcode=<authcodestrin
g>&type=0
```

The Wireshark Capture Listed Below:

```
POST /goform/login HTTP/1.1
Host: 192.168.86.3
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; rv:51.0)
Gecko/20100101 Firefox/51.0
Accept: application/xml, text/xml, */*; q=0.01
Accept-Language: zh-CN, zh; q=0.8, en-US; q=0.5, en; q=0.3
Accept-Encoding: gzip, deflate
Content-Type: application/x-www-form-urlencoded; charset=UTF-8
If-Modified-Since: 0
X-Requested-With: XMLHttpRequest
Referer: http://192.168.1.3/login.html
Content-Length: 69
Connection: keep-alive

cmd=login&user=admin&authcode=6d990a5f8f4f7e61635732febae3496f&type=0
```

NOTE:

The rule for authcodestring listed below:

authcodestring = md5(ChallengeString:GDS3710IZpRsFzCbM:password);

- The “ChallengeString” is the returned string from Server in **Step 1.**
- Password is the login password of the device (GDS37xx)

Server ➔ Client

```
HTTP/1.0 200 OK
Content-Type: text/xml; charset=UTF-8
Set-Cookie: session=6d990a5f8f4f7e61635732febae3496f;path=/;
Set-Cookie: uname=admin; path=/;
Set-Cookie: level=1; path=/;

<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
<ResCode>0</ResCode>
<LoginType>0</LoginType>
<RetMsg>OK</RetMsg>
</Configuration>
```

Note:

- The **red** part is the authentication information returned by the Server after successful authentication.
- This part of the information must exist in the message header before all later on operations can run normally.

Example: Adjust “Unlocking Latency” and “Unlock Hold Time” via HTTP API:

Client → Server

```
POST /goform/config HTTP/1.1
Host: 192.168.86.3
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; rv:51.0)
Gecko/20100101 Firefox/51.0
Accept: application/xml, text/xml, */*, q=0.01
Accept-Language: zh-CN, zh; q=0.8, en-US; q=0.5, en; q=0.3
Accept-Encoding: gzip, deflate
Content-Type: application/x-www-form-urlencoded; charset=UTF-8
If-Modified-Since: 0
X-Requested-With: XMLHttpRequest
Referer: http://192.168.86.3/Pages/doorbasic.html?t=1496977082292
Content-Length: 299
Cookie: session=6d990a5f8f4f7e61635732febae3496f; uname=admin;
level=1; gdsauthkey80=6d990a5f8f4f7e61635732febae3496f;
curpage=doorbasic.html
Connection: keep-alive

cmd=set&P14100=2&P14101=5
```

Note:

- The “P14100=2” means adjusting “Unlocking Latency” to 2 seconds.
- The “P14101=5” means adjusting “Unlock Hold Time” to 5 seconds.
- The red part is the message header in each request after the successful authentication.

Example: Request snapshot via HTTP API:

Step 1: Client → Server (Client sending request to Server, trying to get ChallengeCode)

```
POST /goform/login HTTP/1.1
Host: 192.168.86.3
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; rv:51.0)
Gecko/20100101 Firefox/51.0
Accept: application/xml, text/xml, */*; q=0.01
Accept-Language: zh-CN, zh; q=0.8, en-US; q=0.5, en; q=0.3
Accept-Encoding: gzip, deflate
Content-Type: application/x-www-form-urlencoded; charset=UTF-8
If-Modified-Since: 0
X-Requested-With: XMLHttpRequest
Referer: http://192.168.86.3/jpeg/view.html
Content-Length: 27
Connection: keep-alive

cmd=login&user=admin&type=1
```

Step 2: Server → Client (Server sending ChallengeCode to Client after receiving the request)

```
HTTP/1.0 200 OK
Content-Type: text/xml; charset=UTF-8

<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
<ResCode>0</ResCode>
<ChallengeCode>b00cb908497b74848f94760d6a76c4aa</ChallengeCode>
<RetMsg>OK</RetMsg>
</Configuration>
```

Step 3: Client → Server (Client received ChallengeCode,
via authcodestring= md5(**ChallengeString**:GDS3710!ZpRsFzCbM:**password**); generating
authcodestring,
then sending back the **authcodestring** to Server)

```

POST /goform/login HTTP/1.1
Host: 192.168.86.3
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; rv:51.0) Gecko/20100101
Firefox/51.0
Accept: application/xml, text/xml, */*; q=0.01
Accept-Language: zh-CN, zh; q=0.8, en-US; q=0.5, en; q=0.3
Accept-Encoding: gzip, deflate
Content-Type: application/x-www-form-urlencoded; charset=UTF-8
If-Modified-Since: 0
X-Requested-With: XMLHttpRequest
Referer: http://192.168.86.3/jpeg/view.html
Content-Length: 69
Connection: keep-alive

cmd=login&user=admin&authcode=931b58c7d24800e9d4b1aa39a01dc04a&type=1

```

Step 4: Server → Client (Server received the authcode from Client, successfully verified, Server will send below information to Client)

```

HTTP/1.0 200 OK
Content-Type: text/xml; charset=UTF-8
Set-Cookie: mjpeg_sess=d5e3f029fb7334b2bebd737ea77d09f7;path=/;
Set-Cookie: mjpeg_uname=admin;path=/;
Set-Cookie: mjpeg_level=1;path=/;

<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
</Configuration>

```

Step 5: Later on interactions between Client and Server, the HTTP header should contain strings like “mjpeg_sess, mjpeg_uname, mjpeg_level”.

For example:

```
GET /snapshot/view0.jpg?0.9801228921400826 HTTP/1.1
Host: 192.168.86.3
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; rv:51.0)
Gecko/20100101 Firefox/51.0
Accept: */*
Accept-Language: zh-CN, zh; q=0.8, en-US; q=0.5, en; q=0.3
Accept-Encoding: gzip, deflate
Referer: http://192.168.86.3/jpeg/view.html
Cookie: mjpeg_sess=931b58c7d24800e9d4b1aa39a01dc04a;
mjpeg_uname=admin; mjpeg_level=1
Connection: keep-alive
```

Note:

- “mjpeg_sess” is string from Server to Client after successful authentication, used for all later on request.
- “mjpeg_uname” is User Name or ID
- “mjpeg_level” is fixed as “1”

MJPEG Stream

Login Authentication: The authentication is using Challenge / Response encryption mode. After the successful authentication by the administrator, each later on operations will be accepted and successful ONLY when the correct authentication information is included inside the request header.

The authentication process is as following:

Step 1:

Client → Server

```
https://<servername>/goform/login?cmd=login&user=admin&type=1
```

Server → Client

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <ChallengeCode>ChallengeString</ChallengeCode>
    <LoginType>0</LoginType>
    <RetMsg>OK</RetMsg>
</Configuration>
```

Step2:

Client → Server

```
https://<servername>/goform/login?cmd=login&user=admin&authcode=<authcodestring>&type=1
```

NOTE:

The rule for authcodestring listed below:

- **authcodestring** = md5(ChallengeString:GDS3710!ZpRsFzCbM:password);
- The “ChallengeString” is the returned string from Server in **Step 1.**
- password is the login password of the device (GDS37xx)

Server → Client

```
HTTP/1.0 200 OK Content-Type: text/xml; charset=UTF-8
Set-Cookie: mjpeg_sess=396a6328e70f3b1b984f7d6f08159a49;path=/;
Set-Cookie: mjpeg_uname=admin;path=/;
```

```

Set-Cookie: mjpeg_level=1;path=/;

<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
</Configuration>
```

Note:

- The red part is the authentication information returned by the Server after successful authentication.
- This part of the information must exist in the message header before all later on operations can run normally.

Below is an Example:

Step 1: Client → Server (Client sending login request to Server, trying to get ChallengeCode)

```

POST /goform/login HTTP/1.1
Host: 192.168.86.3
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; rv:51.0)
Gecko/20100101 Firefox/51.0
Accept: application/xml, text/xml, */*; q=0.01
Accept-Language: zh-CN, zh; q=0.8, en-US; q=0.5, en; q=0.3
Accept-Encoding: gzip, deflate
Content-Type: application/x-www-form-urlencoded; charset=UTF-8
If-Modified-Since: 0
X-Requested-With: XMLHttpRequest
Referer: http://192.168.86.3/jpeg/mjpeg.html
Content-Length: 27
Connection: keep-alive

cmd=login&user=admin&type=1
```

Step 2: Server → Client (Server sending ChallengeCode to Client after receiving the request from Client)

```

HTTP/1.0 200 OK
Content-Type: text/xml; charset=UTF-8
```

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <ChallengeCode>c1cd724b1fc2d552652bba09a56f6f3c</ChallengeCode>
    <RetMsg>OK</RetMsg>
</Configuration>
```

Step 3: Client → Server (Client receiving ChallengeCode,
 via `authcodestring = md5(ChallengeString:GDS3710IZpRsFzCbM:password);`,
 generating `authcodestring`, then sending this `authcodestring` back to Server)

```
POST /goform/login HTTP/1.1
Host: 192.168.86.3
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; rv:51.0)
Gecko/20100101 Firefox/51.0
Accept: application/xml, text/xml, */*; q=0.01
Accept-Language: zh-CN, zh; q=0.8, en-US; q=0.5, en; q=0.3
Accept-Encoding: gzip, deflate
Content-Type: application/x-www-form-urlencoded; charset=UTF-8
If-Modified-Since: 0
X-Requested-With: XMLHttpRequest
Referer: http://192.168.86.3/jpeg/mjpeg.html
Content-Length: 69
Connection: keep-alive

cmd=login&user=admin&authcode=a7539fb022664d07c23f736a643be55&type=1
```

Step 4: Server → Client (Server received the authcode from Client, successfully verified,
 Server will send below information to Client)

```
HTTP/1.0 200 OK
Content-Type: text/xml; charset=UTF-8
Set-Cookie: mjpeg_sess=a7539fb022664d07c23f736a643be55;path=/;
Set-Cookie: mjpeg_uname=admin;path=/;
Set-Cookie: mjpeg_level=1;path=/;
```

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>OK</RetMsg>
</Configuration>
```

Step 5: Later on interactions between Client and Server, the HTTP header should contain strings like “mjpeg_sess, mjpeg_uname, mjpeg_level”.

For example as shown below:

```
GET /snapshot/view0.jpg?0.9801228921400826 HTTP/1.1
Host: 192.168.86.3
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; rv:51.0)
Gecko/20100101 Firefox/51.0
Accept: /*
Accept-Language: zh-CN, zh; q=0.8, en-US; q=0.5, en; q=0.3
Accept-Encoding: gzip, deflate
Referer: http://192.168.86.3/jpeg/mjpeg.html
Cookie: mjpeg_sess=a7539fdb022664d07c23f736a643be55;
mjpeg_uname=admin; mjpeg_level=1
Connection: keep-alive
```

NOTE:

- “mjpeg_sess” is string from Server to Client after successful authentication, used for all later on request.
- “mjpeg_uname” is User Name or ID
- “mjpeg_level” is fixed as “1”
- The red part is the authentication information header that the cookie must be carried during the operation.

HTTP API to Open Door

HTTP API Open Door Authentication: The authentication is using Challenge/Response encryption mode. After the successful authentication by the administrator, each later on operations will be accepted and successful ONLY when the correct authentication information is included inside the request header.

The authentication process is as following:

Step 1:

Client → Server

```
[http|https]://<servername>/goform/apicmd?cmd=0&user=admin
```

Server → Client

```
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg></RetMsg>
    <ChallengeCode>5c0e1f55b54be2d0c56004ba349fb726</ChallengeCode>
    <IDCode>UM1NWDJYC19LOEYQRWNA</IDCode>
</Configuration>
```

Step2:

Client → Server

```
[http|https]://<servername>/goform/apicmd?cmd=1&user=admin&authcode=<authcodes
tring>&idcode=<idcodestring>&type=opt_type
```

NOTE:

The rule for authcodestring listed below:

authcodestring = md5(ChallengeString:remote_pin:password);
idcodestring = The node value of “IDCode”, such as “UM1NWDJYC19LOEYQRWNA”
above example.

opt_type = 1: open door, **2:** close door

- - The “**ChallengeString**” is the returned string from Server in **Step 1**.
- - Remote_pin must be seted before and no null.
- - password is the login password of the device (GDS37xx).

If authentication OK, the return message like this:

```
HTTP/1.0 200 OK Content-Type: text/xml;charset=UTF-8
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>0</ResCode>
    <RetMsg>Authentication OK</RetMsg>
</Configuration>
```

If authentication Failed, the return message like this:

```
HTTP/1.0 200 OK Content-Type: text/xml;charset=UTF-8
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>1</ResCode>
    <RetMsg>Authentication error</RetMsg>
</Configuration>
```

If the HTTP API to open door disable, then the return message like this:

```
HTTP/1.0 200 OK Content-Type: text/xml;charset=UTF-8
<?xml version="1.0" encoding="UTF-8" ?>
<Configuration>
    <ResCode>1</ResCode>
    <RetMsg>HTTP API open door function is disable</RetMsg>
</Configuration>
```

If the remote open door PIN is null, then the return message like this:

```
HTTP/1.0 200 OK Content-Type: text/xml; charset=UTF-8
<?xml version="1.0"encoding="UTF-8" ?>
<Configuration>
    <ResCode>1</ResCode>
    <RetMsg>Authentication error. Remote PIN is null</RetMsg>
</Configuration>
```

Notes:

- The **RED** part is the authentication information returned by the Server after successful authentication.
- This part of the information must exist in the message header before all later on operations can run normally.
- The user must be “admin”, others do not have the privilege.
- Validity of the **idcodestring** come from step 1 is 30 seconds, it is mean that user must finish the step 2 in 30 seconds, or the idcodestring will timeout and invalid. (This parameter can be configured under **Door System Settings → Basic Settings → Open Door Valid Time**)
- The “type=1” means that the HTTP API is for open door.
